

**Write a java code to create a list of integers the MaxSize is 500. 😊**

**Create these functions:**

**1) Insert:** This function is used to insert value into list this value is [1,5,6,7,8,9,10]

**1)Print:** This function is used to print all data in a list

**2)Insert:** This function is used to insert a value based on a specific position.

For example, if add a new data (data=4) in position 1 the new list is [1,4,5,6,7,8,9,10].

**3) Modify or Set:** This function is used to update data in a list.

**4)Read or get:** This function is used to retrieve data from a list based on position.

**5) Remove:** This function is used to remove the data from a list.
