Text Transformation – Power BI Query

Load the dataset then:

- Merge two columns (Year and education level) to create one column called Merged1 separated by space.
- Using delimiter, split the Date column into 3 new columns (day1, month1, year1).
- Apply Lowercase functions on the Purpose column then capitalize each word.
- Add Suffix and Prefix → Modify Feedback column to My feedback is ** point.
- Apply a trim function on the income column.
- Extract the first character from the Weekday column.
- Apply the Range function to the week_num column starting from 1 to 5.
