# AlHussein Technical University

SQL Lab

Using XAMPP and SQL , refer to the physical design below and do the following:

1. Create the database and name it (yourFirstName's library). Example: Aisha's library
2. Create entities and their attributes
3. Specify the primary keys
4. Specify the foreign keys
5. Rename one table to (your_name). Example: Jude_Barakat
6. Choose an attribute constraint and alter it
7. Take a screenshot of your database after editing it
8. Copy the SQL commands to a .txt file.
9. Submit the .txt file **and** screenshot on e-Learning
Note: Not following instructions will lead to not grading the lab
